

Customisable settings in the testing platform

Participants have the option to adjust certain settings in the testing platform.

Once you have started the test, click the **settings icon** () in the top right corner to customize your **test preferences**.

A screenshot of a "Settings" dialog box. The title bar at the top is light gray and contains the word "Settings". Below the title bar, there is a list of five settings, each with a checkbox and a label: "Use large font", "Use dyslexia mode", "Use high contrast mode", "Show remaining time", and "Notify when 15 minutes are left". The checkboxes for "Show remaining time" and "Notify when 15 minutes are left" are checked and highlighted with a blue checkmark. The other three checkboxes are unchecked. At the bottom right of the dialog box, there is a button labeled "Close".

Please note:

- Consider in advance whether you would like to use these support features.
- You can adapt these settings at any time during the test.
- These settings do not affect the content of the test, only how the text and interface are displayed.

Below you can find more information about each of these settings.

1. Use large font

This option increases the standard font size from **10.5 pt** to **13.5 pt**. This can be useful if you prefer a larger, clearer reading experience or if you have difficulty reading small letters.

2. Use dyslexia mode

Dyslexia mode ensures that all text is displayed in the **Arial** font.

3. Use high contrast mode

The high contrast mode changes the colours of the test platform to **black and yellow**. This strong contrast can make reading easier, especially if you have difficulty with subtle colour differences or if your eyes strain easily. With this setting, text and buttons stand out more clearly.

4. Show remaining time

During the test, the remaining time is displayed by default. However, if continuously seeing the countdown timer causes additional stress, you can choose to hide it.

The end time of the test is, of course, still automatically monitored by the system.

Hiding the countdown timer during the test can be useful if:

- You experience additional stress or pressure because of the visible countdown timer;
- You notice that your concentration decreases because you are constantly checking the timer;
- You find it easier to stay focused and calm when the remaining time is not continuously displayed on the screen.

You can adjust this setting at any time during the test to check how much time you have left.

5. Notify when 15 minutes are left

This setting is active by default. We recommend keeping this box selected so you receive a notification 15 minutes before the end of the test. This setting is especially useful if you have decided not to show the remaining time.
